CAREER PROFILE

Hardworking software development professional driven to increase team effectiveness. Focused on usability and performance improvements. Experienced in communicating with clients and attending to their requests.

So far, according to past performance reviews, some of my advantages are: availability, performance, flexibility (multiple technologies), debugging/analysis and being effective when communicating.

And one disadvantage is visibility, I have some trouble exposing my work, so outside of my teammates/managers, it might seem I'm not performing as well as I actually am.

EXPERIENCES

Software Engineer
IntellectEU

2022 - Present

With IntellectEU I adventured deeper into functional programming, which I was interested since university. Here I am working with Daml which works with contracts, as well as python for integrations. Currently my tasks are:

- As a Backend developer, add new features and correct bugs, both in daml side and integrations side. This means I am working with both parts of the application from the backend and also handle communication between them.

Software Engineer
Code One, Porto

2021 - 2022

Whereas Accenture allowed me to enter the professional field, I realised that my personal passion lays on the new software / solutions development. My currents tasks by Code One, are:

- Full-Stack developer: programming and working in front-end and back-end development for projects related to B2B and B2C commerce using the languages Python and C# and databases as PynamoDB and SQL.

Analyst Application Developer
Accenture, Braga

2019 - 2021

Accenture was my first contact with the professional field, where I had the opportunity as a backend developer, to give support to 3 important projects with customers in USA, Italy and Brazil. Among others tasks I had the opportunity to:

- Create scripts which could give Accenture an overview about the status of the different servers we had to support, allowing Accenture to improve the quality of its support.
- Write new features in C# such as a unique way to sort strings and also fix bugs.
- Create deploy guides.
- Database corrections.
- Detect bugs, correcting and add features to existing programs, helping to expand the business.

PROJECTS

Currently adventuring into mobile apps on my free time. At the moment building a restful api for one app.

SKILLS & PROFICIENCY

Skill	
C#	
Python	
Java	
Haskell / Daml	
SQL DB	

Nuno Marques
Software Engineer
